

DANIIL DMITRIEV

Schärenmoosstrasse 18, 8052 Zürich, Switzerland dmitrievdaniil97@gmail.com

daniildmitriev.github.io

EDUCATION

- ETH Zurich** (PhD at ETH AI Center) Sep 2021 to now
Working on mathematics in data science, supervised by Prof. Afonso Bandeira and Prof. Fanny Yang
- EPFL** (Master of Data Science) 2018 to 2021
5.57 out of 6.0 GPA, Computational Neuroscience Minor
- Moscow Institute of Physics and Technology** (Bachelor of Computer Science) 2014 to 2018
3.77 out of 4.0 GPA

WORKING EXPERIENCE

- **Bloomberg L.P.** Research AI Intern in News Intelligence team London, Sep 2020 – Jan 2021
Applying the diversification methods to improve the output of the recommendation system. Created pipeline for the experiments and compared the common diversification approaches (MMR, DPP) across multiple metrics.
- **EPFL** Research Scholar Student in Machine Learning and Optimization lab Lausanne, Sep 2018 – Aug 2020
Worked on neural networks compression (model pruning, model quantization, gradient compression). Was involved in developing, implementing and analysing model pruning methods both during and before the training (on initialization).
- **Amazon** Software Engineering Intern in Computer Vision team Berlin, Jul 2018 – Sep 2018
Worked on image captioning task. Used reinforcement learning to optimize non-differentiable objectives used for evaluating the quality of the image caption. Showed the advantage compared to differentiable loss-functions.
- **Google** Software Engineering Intern in Key Visualizer team New York City, Jul 2017 – Oct 2017
Used clustering and time series analysis (DBSCAN, Granger Causality) to find dependencies in complex multivariate temporal data.

STUDENT PROJECTS

- *Empirical Study of Gradient-Based Optimization Methods in High-Dimensional Regime*, Master Project, 2021, supervised by Dr. Federica Gerace and Prof. Lenka Zdeborová
Investigated gradient descent and variants of SGD for the phase retrieval (regression) and symmetric door (classification) prototypical problems. Following the teacher-student framework looked into simple and overparametrized settings and showed the effect of momentum.
- *Topological Perspective of Brain Development*, 2020, supervised by Dr. Lida Kanari and Prof. Kathryn Hess Bellwald
Applied tools from the Topological Data Analysis, such as Persistence Diagrams, to compare multiple in silico and in vivo datasets of the mice astrocyte cells. Proposed a way to combine spacial and structural properties of the cells.
